

COVID-19 vaccination is safe for children aged 5 to 11

1.

Vaccination greatly reduces the risk of serious illness and complications from COVID-19.

2.

It protects your child and family, and keeps schools safe.

3.

Your child may have common side effects like muscle ache and fever. These are mild and go away in a few days.

Walk into any paediatric vaccination centre before 7pm. More information at vaccine.gov.sg.
